

WHAT IS CLAIMED IS:

1. A disk player for holding a plurality of disks at disk standby positions in a casing, so that a disk selected from said plurality of disks may be transferred to a disk playing position in said casing and may be reproduced, comprising:

a plurality of disk trays stacked in a predetermined direction for receiving said plurality of disks individually thereon;

disk playing means for playing one of said plurality of disks at said disk playing position to reproduce information recorded on said disk; and

a disk playing means supporting mechanism for supporting said disk playing means movably in a predetermined direction,

wherein during a movement in which one of said disk trays is being moved from said disk standby position to said disk playing position, said one of disk trays comes into engagement with said disk playing means supporting mechanism to move said disk playing means in said predetermined direction.

2. A disk player according to Claim 1,

wherein said disk playing means supporting mechanism supports said playing means in said predetermined direction in a manner so as to rock on a rocking fulcrum.

3. A disk player according to Claim 2, further comprising:

elastic means arranged adjacent said rocking fulcrum for generating a biasing force in a direction from said disk standby

position to said disk playing position.
